

The Industry Standard in IT Infrastructure Monitoring

Purpose

This document describes how to upgrade an existing Nagios Fusion installation with the latest updates and patches. Instructions are valid for upgrading Nagios Fusion 2010 Beta 1 and later.

Target Audience

This document is intended for use by Nagios Administrators, Nagios Authorized Resellers, and implementation partners.

Preparing To Upgrade

Prior to upgrading, you will need to login to your Nagios Fusion server as the root user.

It is recommended to backup your existing Nagios Fusion installation before attempting the upgrade process. Make sure to backup the following directories prior to upgrade:

```
/usr/local/nagiosfusion
```

Getting the Update

On the your Nagios Fusion server, first change to the /tmp directory:

```
cd /tmp
```

Next, download the latest stable or development release to the /tmp directory on the Nagios Fusion server.

To download the latest stable release, use the following command:

```
wget http://assets.nagios.com/downloads/nagiosfusion/fusion-2010-latest.tar.gz
```

To download the latest development release, use the following command:

```
wget http://assets.nagios.com/downloads/nagiosfusion/fusion-2010-latest-devel.tar.gz
```

Installing the Update

Unpack the update tarball you just downloaded:

```
tar xzf fusion-2010-latest.tar.gz
```

or (for the development version):

```
tar xzf fusion-2010-latest-devel.tar.gz
```

Change to the new nagiosfusion subdirectory:

```
cd /tmp/nagiosfusion
```

Run the appropriate upgrade script:

```
./upgrade
```

Verifying the Upgrade

Once the upgrade scripts complete, you should login to the Nagios Fusion interface and verify things are still working. The Fusion interface can be accessed using a URL like the following:

```
http://<ipaddress>/nagiosfusion
```

where <ipaddress> is the IP address of your Nagios Fusion server.

Clearing the Session Cache

Once you've logged into the Nagios Fusion interface, hold down the *shift* key and click the *reload* button in your browser to clear out any old session variables and cached javascript code.

If You Encounter Problems

If you encounter problems during or after the upgrade, please post a message on our support forum:
