

The Industry Standard in IT Infrastructure Monitoring

Nagios® XI™ 2014 builds upon the proven Open Source Nagios Core monitoring engine to provide users with extended features, capabilities, and more comprehensive network monitoring solution. Upgrading to Nagios XI can greatly increase organizational efficiency and network stability. Below are a number of benefits users can gain by upgrading from Nagios Core to Nagios XI.

Benefits Of Nagios XI 2014:

- **Powerful Web Interface**
Nagios XI's home screen dashboard provides users with a high-level overview of hosts, services, and network devices. The powerful web interface is easy-to-navigate for increased performance.
- **Configuration Wizards**
Users can configure network devices quickly and easily with UI-based configuration wizards. Tailor Nagios XI 2014 to meet specific needs and monitor entire infrastructures with just a few clicks.
- **Comprehensive Monitoring Suite**
Nagios XI 2014 integrates seamlessly with other Nagios products such as Network Analyzer, Fusion, and Incident Manager creating the ultimate Network Monitoring Suite.
- **Deeper Insight Into Infrastructure Problems**
Custom views allow you to spot problems and trends that are otherwise difficult to find. Condensed views provide admins with a heads-up overview of the status of a wide range of critical elements.
- **More Powerful Reporting**
Enhanced reports make it easier to gather information on availability, alert history, trends, and top problem producers. CSV and PDF export allow you to share reporting data with constituents. New visualization tools allow you to analyze current and historical data in ways that are easier for users to comprehend.
- **Faster Problem Resolution**
Integrated tools and redesigned interfaces allow users to quickly identify problems and begin resolution, resulting in decreased downtime and business losses.
- **Enterprise Infrastructure Management**
Auto-Discovery Tool allows you to quickly monitor devices, services, and applications across your networks with ease. Bulk Host Import Tool allows for configuration of multiple hosts at once. Mass Acknowledgment Tool allows users to acknowledge large amounts
