

# Using a Proxy Server with Nagios Log Server 2024

## Proxy Configuration

1. In the Nagios Log Server web interface navigate to Admin > General > Proxy Configuration.

**Nagios LS** Home Dashboards Alerting **Configure** Help Admin Search logs ... nagiosadmin Logout

**Proxy Configuration**

These proxy settings, when enabled, *only* apply to internal Log Server calls back to Nagios. The calls include update checks, maintenance checks, and activation.

☒ Enable proxy for update checks, maintenance checks, and activation

Proxy Settings

Proxy Address: 10.25.10.1

Proxy Port: 3128

Proxy Auth: username:password

☒ Use HTTP Tunnel

Save Settings

2. The first setting you will need to check is the Enable proxy at the top of the screen.
3. You will then need to provide an address and port. A username and password is optional, this is only required if your proxy server uses authentication.
4. Click the Save Settings button once you have provided all the required values.

## Run Update Check

To confirm that the proxy settings are working you will need to go and force the run\_update\_check job to execute. Navigate to Admin > System > Command Subsystem. For the run\_update\_check job, click the Run link in the Actions column.

**Nagios<sup>®</sup> LS** Home Dashboards Alerting Configure Help **Admin** Search logs ... nagiosadmin Logout

Global Settings

## Command Subsystem

The command subsystem runs all the jobs that are scheduled for backup, maintenance, and checks. It also runs occasional jobs that are required by other sections of the program. Other jobs use the command subsystem to run but are not listed here. System jobs that are in **waiting** status are normal.

**System Jobs** [Reset All Jobs](#)

Job ID	Job Status	Last Run Status	Last Run Time	Frequency	Next Run Time	Type	Actions
cleanup_cmdsubsys	Waiting	-	Never	1 hour	11/03/2017 12:30:24	System	<a href="#">Edit</a> <a href="#">Run</a>
backups	Waiting	-	Never	1 day	11/04/2017 11:30:24	System	<a href="#">Edit</a> <a href="#">Run</a>

run_all_alerts	Waiting	SUCCESS	11/03/2017 11:34:52	20 seconds	11/03/2017 11:35:12	System	<a href="#">Edit</a> <a href="#">Run</a>
run_update_check	Waiting	SUCCESS	11/03/2017 11:31:11	1 day	11/04/2017 11:31:11	System	<a href="#">Edit</a> <a href="#">Run</a>

**Update Check**

You're running the latest version of Nagios Log Server.

When you navigate to the Home screen you should see the status in the Update Check section. If the proxy was not working then you would only see a spinning icon.
