

How To Configure Email Sending In Nagios Network Analyzer 2026

Purpose

This document describes how to configure your email notification settings in Nagios Network Analyzer 2026.

Navigation

To access your email settings, navigate to **Administration > Notification Settings**.

The screenshot shows the Nagios Network Analyzer web interface. The left sidebar has a dark theme with white icons and text. The 'Administration' section is expanded, showing 'Global Settings', 'Notification Settings' (which is highlighted with a yellow box and circled), 'User Management', 'LDAP/AD Integration', 'Update License', and 'System Backup'. The main content area has a light background. It shows the 'Notification Settings' page with the sub-section 'Mail Settings'. Under 'Mail Settings', there is a 'Send From' field containing 'address@someplace.us' and a 'Mailer' section with 'Sendmail' selected (radio button is checked). The overall layout is clean and modern.

Activating Email Notifications

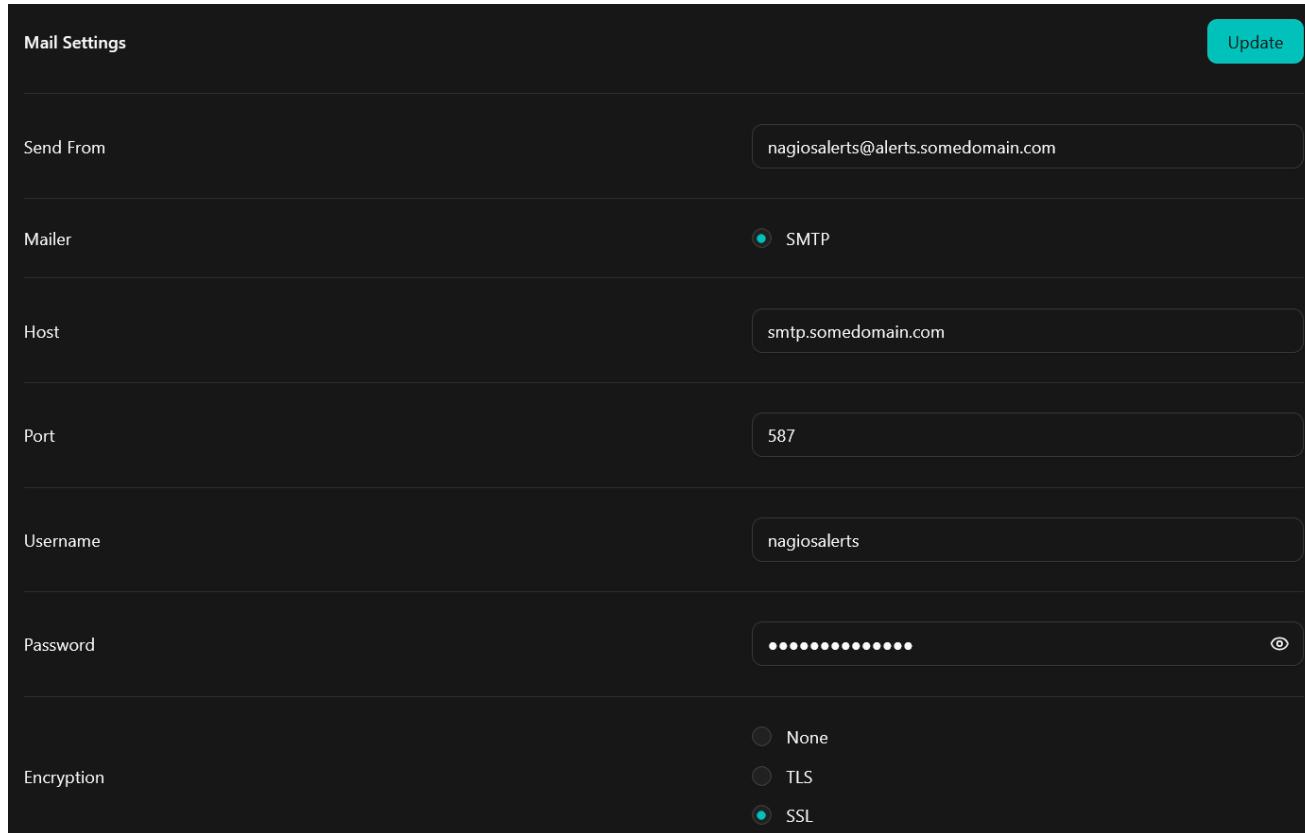

To enable email notifications, switch on the **Mail** toggle in the top **Notification Channel** section.

The screenshot shows the 'Notification Settings' page with the 'Notification Channel' section. The 'Mail' toggle switch is highlighted with a yellow box. The switch is in the 'on' position, indicated by a blue circle. The overall design is consistent with the previous screenshot, maintaining the dark sidebar and light content area.

How To Configure Email Sending In Nagios Network Analyzer 2026

Mail Settings

In the Mail Settings section, add the SMTP settings for the account you'd like to use to send notifications, and click the **SMTP** checkbox in the **Mailer** section.
