Platform Support

See [Nagios Software/Operating System \(OS\) compatibility matrix](#)

If you discover bugs or have fixes for installing Nagios Fusion on other platforms, please let us know. We will do our best to incorporate your improvements to expand support for additional platforms in future Fusion releases, which will make future installation processes smoother for you and your clients.

Installation Prerequisites

Important Note: Nagios Enterprises highly recommends and will only support installing Nagios Fusion on a newly installed, "clean" system (a bare minimal install with nothing else installed or configured).

Attempting to install Nagios Fusion on a pre-existing system with other applications already installed can cause the Nagios Fusion installation process to fail, critical system components and settings (e.g. database servers) to be modified in a way that negatively affects other applications, and previously installed applications to be automatically upgraded or removed. While installing Fusion on a system with other applications is possible, it is not recommended due to the possible interactions and complexity of multiple components that are required for Nagios Fusion to function. If you choose to ignore these warnings, you do so at your own risk.

Internet access is required for installation and upgrades!

Terminal Access

These instructions require you to establish a terminal session to the server you plan to install Nagios Fusion on. You will need to log in to your server as the root user to perform the installation.

How To Manually Install Nagios Fusion - 2024

Manually Install Nagios Fusion

Install Nagios Fusion by issuing the following commands in your terminal session:

```
cd /tmp
wget https://assets.nagios.com/downloads/nagiosfusion/fusion-latest.tar.gz
tar xzf fusion-latest.tar.gz
cd nagiosfusion
./fullinstall
```

Once the installation has completed you should see a message like the following:

```
Install complete!
Nagios Fusion Installation Complete!
-----
You can access the Nagios Fusion web interface by visiting:
http://<server_ip_address>/nagiosfusion
```

Finishing Installation

Navigate to the user interface by using the URL provided in your terminal session. You will be presented with the **Install** screen with the **General Program Settings** and **Timezone Settings** (already populated with defaults). You can also change the default display theme.

The screenshot shows the 'Install' screen for Nagios Fusion. It features three main sections: 'General Program Settings', 'Timezone Settings', and 'Theme Settings'. The 'General Program Settings' section includes fields for 'Internal URL' (http://192.168.153.15/nagi), 'Administrator Username' (nagiosadmin), 'Administrator Name' (Nagios Administrator), 'Administrator Email' (root@localhost), and 'Administrator Password' (vp,h\$rap3b.da8ne72). The 'Timezone Settings' section has a dropdown menu for 'Timezone' set to '(UTC+00:00) UTC'. The 'Theme Settings' section has a dropdown menu for 'Theme' set to 'Modern'. An 'Install' button is located at the bottom left of the form.

1. It is recommended that you change the **Administrator Password** to something you will remember and make sure you record the password in a secure location.
2. Update the **Administrator Name** and **Administrator Email** as required.
3. Click the **Install** button to complete the installation.

How To Manually Install Nagios Fusion - 2024

4. You will be provided with a summary of the username password. Click the **Login to Nagios Fusion** button and you will be directed to the login screen.

Install Complete

Congratulations! You have successfully installed Nagios Fusion.

You may now login to Nagios Fusion using the following credentials:

Username: **nagiosadmin**

Password: **vp,h\$rap3b.da8ne72**
