

Using A Proxy Server In Nagios Fusion 2024 And 2026R1

Purpose

This document describes how to configure Nagios Fusion 2024 and 2026R1 to use a proxy for update checks, maintenance checks, and activation.

Proxy Configuration

1. In the Nagios Fusion web interface, navigate to **Admin > System Configuration > Proxy Configuration**.
2. Check the **Enable proxy for update checks, maintenance, checks, and activation** box.
3. Check the **Use proxy for polling fused servers** box if required.
4. The **Proxy Address** and **Proxy Port** fields are required.
5. The **Proxy Auth** field is an optional field only necessary if the proxy requires authentication. The format is `username:password`.
6. **Use HTTP tunnel** is optional and is enabled by default, change this setting if required.
7. Click the **Update Settings** button once you have provided all the required values.

Proxy Configuration

Set up the proxy that Nagios Fusion will use when contacting external Nagios servers and websites.

Enable proxy (update and maintenance checks, activation from the GUI, and upgrades from the GUI)
 Use proxy for polling fused servers.

Proxy Settings

Proxy Address:

Proxy Port:

Proxy Auth:

Use HTTP tunnel

Update Settings Cancel

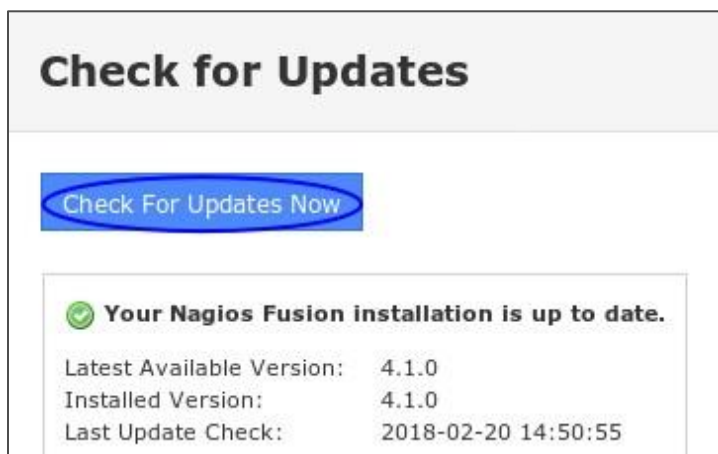

Using A Proxy Server In Nagios Fusion 2024 And 2026R1

Run Update Check

To confirm that the proxy settings are working, run a check for updates.

1. Navigate to **Admin > System Information > Check for Updates**.
2. Click the **Check For Updates Now** button.

If the proxy server is correctly configured then it will update the screen comparing your installed version of Nagios Fusion against the latest available release.

If the proxy is not working or incorrectly configured then you will be informed that the update check failed.

Finishing Up

This completes the documentation on using a proxy server in Nagios Fusion. If you have additional questions or other support-related questions, please visit us at our Nagios Support Forum, Nagios Knowledge Base, or Nagios Library:
