# Customizing The Landing Page In Nagios XI 2026

Purpose

This document describes how to customize the landing page that users see when they initially login to the Nagios XI web interface. One of the benefits of Nagios XI is the flexibility to customize the information users see in the web interface. Customizing the **Home** page within Nagios XI allows users to get the most important information as soon as they log into Nagios XI.
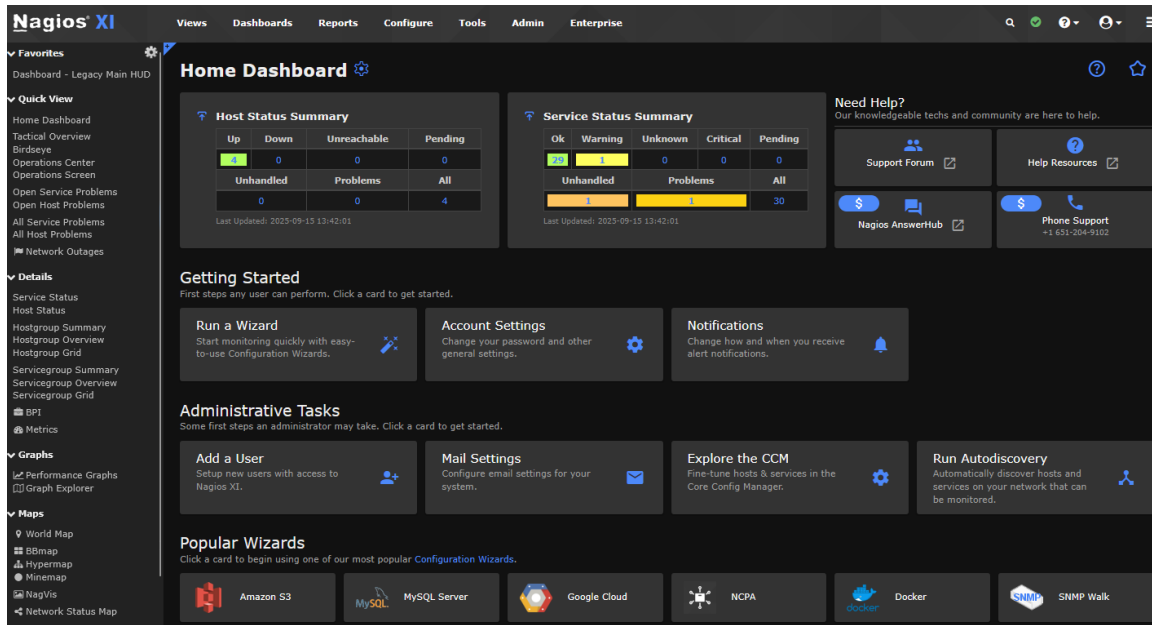

The Default Landing Page

By default, the Home Landing page that users are directed to upon initial login is the Static Dashboard, which provides an overview of host and service status information and links to useful getting started resources and popular configuration wizards. Here's a look at the Static Dashboard in the Neptune theme, and in the Modern Dark theme.
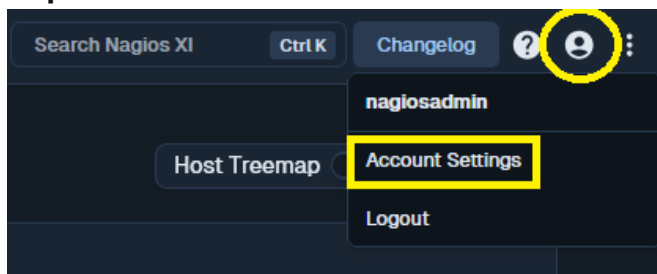

Neptune Static Dashboard

**Nagios**®

Modern Dark Static Dashboard

Note that you can change your theme anytime in the **User Interface Theme** section of the **Account Settings** menu, accessible on the far upper right of the interface.
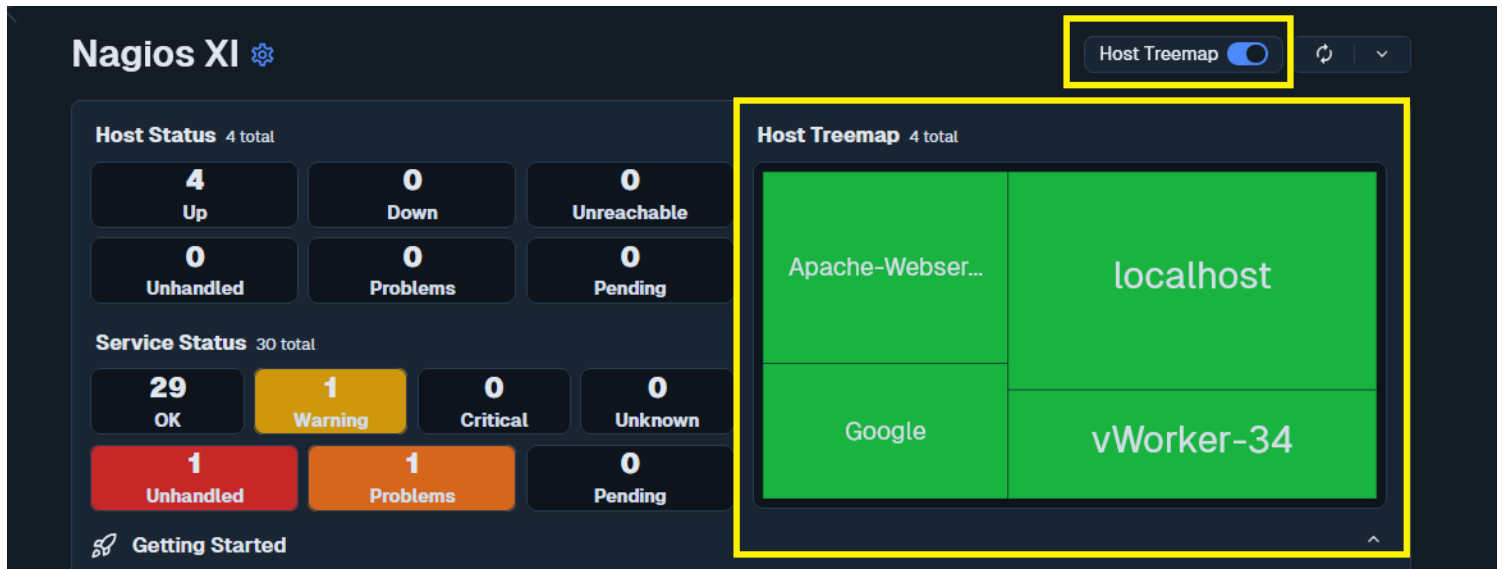

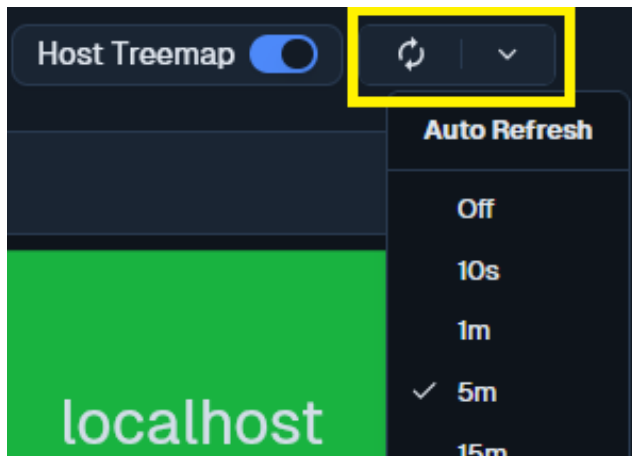

Neptune

Modern Dark

Neptune Theme Treemap Toggle and Refresh Options

One key difference between the Static Dashboard in the themes is that if you are using Neptune, you'll notice a **Host Treemap** toggle on the upper right. This determines whether a treemap of host status' will display or not.

To the right of the Treemap toggle is a refresh button you can click to manually refresh the Home page to reflect the latest status data, and a dropdown you can use to modify the Auto Refresh interval, which by default is set to 5 minutes.
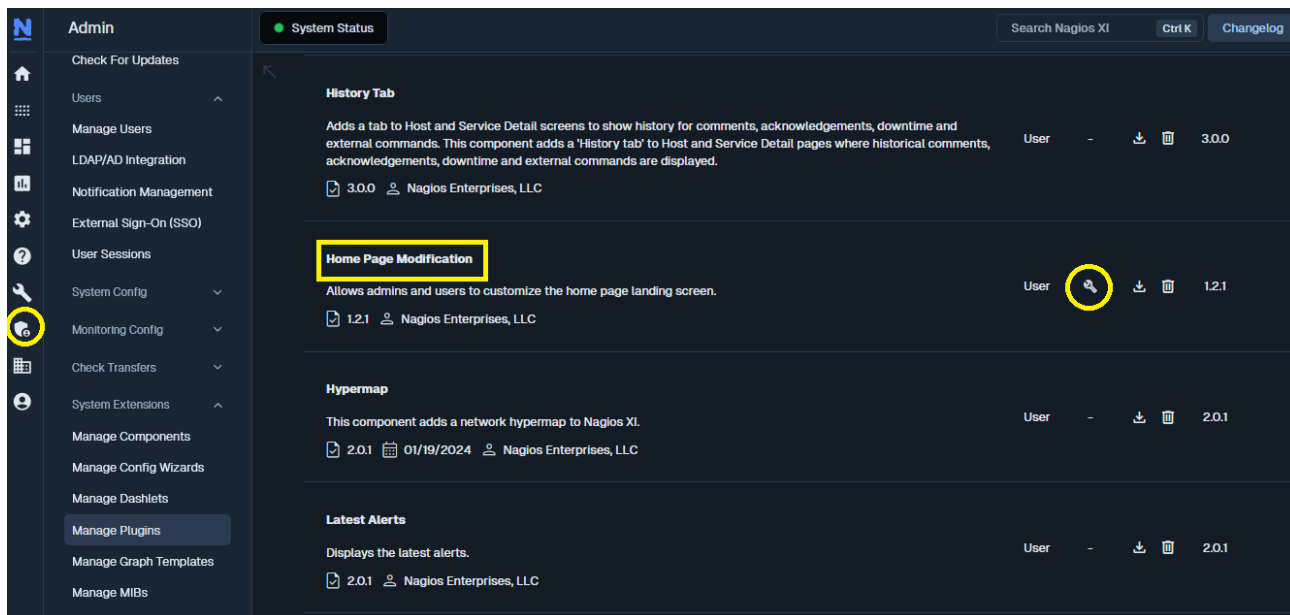

Customizing the Home Page

Managing the Home Page Modification Component

The **Home Page Modification** component allows you to set the default **Home Page Title** and **Home Page Destination**.

To access the component, navigate to **Admin > System Extensions > Manage Components**, find the **Home Page Modification** component in the list, and click the wrench icon.
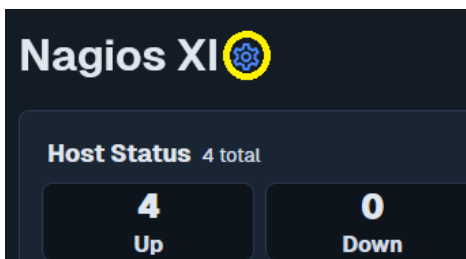

The default **Home Page Destination** can be set to:

- **Static Dashboard:** the default, out-of-the box dashboard explained above
- **Home Dashboard:** the users Home Page Dashboard, which can be customized
- **Custom URL:** a custom URL, for example a specific XI page or custom Dashboard, or a company website.

The **Allow user to override their default home page settings** option determines whether users will inherit the global settings you define here, or are free to customize their Home page to show whatever they'd like.

Setting a Custom Home Page

If you are using the default Static Dashboard, you can click the gear icon at the top of the page to go directly to the **Home Page Options** menu.

Alternately, you can click the **Account** menu or the person icon on the upper right of the interface (as outlined on p.2 above), then go to **My Account > Home Page Options**.
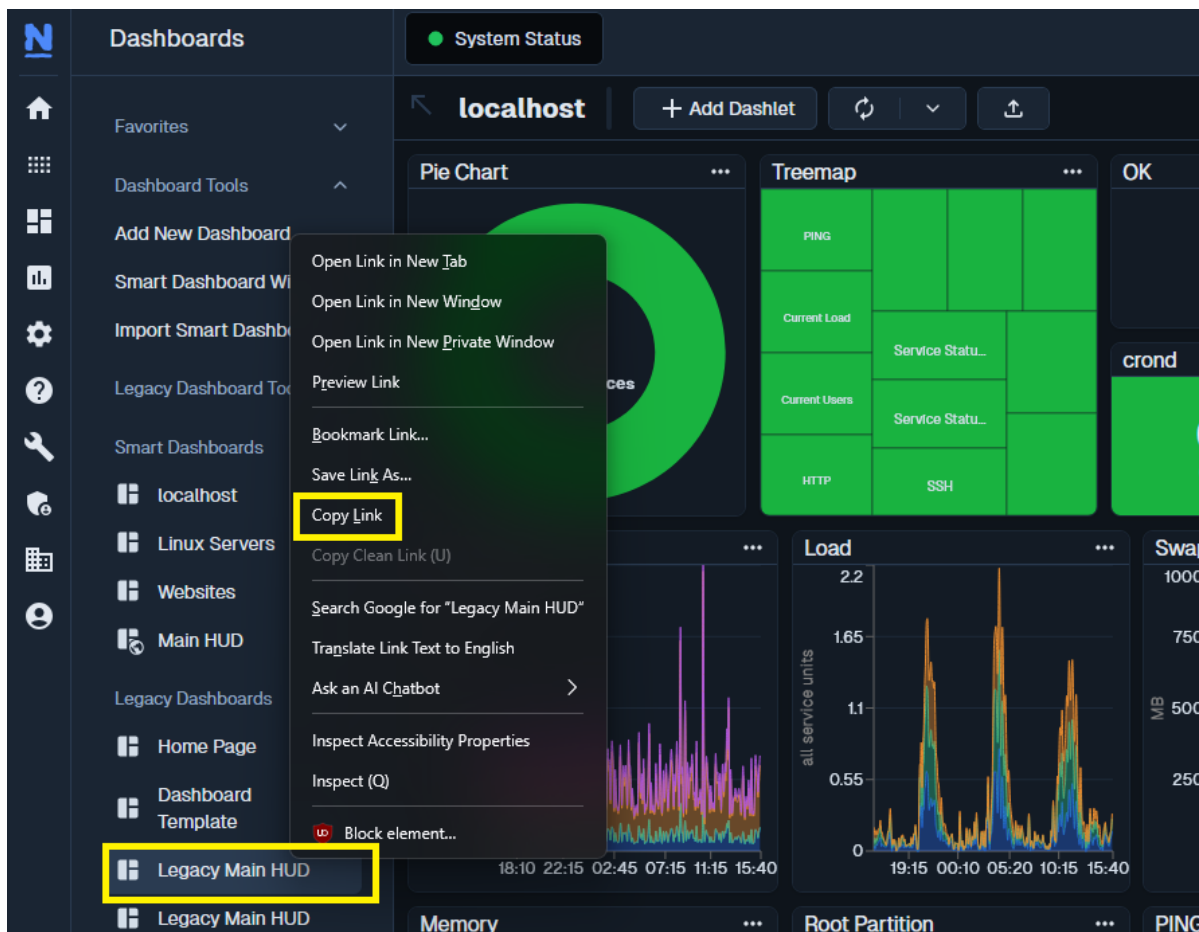

Home Page Title determines the title that will show for your Home page. You can select either to keep the **Admin Default** or create a **Custom** title. Note that the title of the Static Dashboard cannot be changed by users.

Home Page Destination provides several options:

- **Admin Default:** show the default Home page selected in the Home Page Modification component.
- **Static Dashboard:** the default, out-of-the box dashboard explained above
- **Home Dashboard:** the users Home Page Dashboard, which can be customized.
- **Custom URL:** a custom URL, for example a specific XI page or custom Dashboard, or a company website.

To make a custom Nagios XI dashboard your Home page, navigate to the **Dashboards** menu, then right-click the name of the dashboard in **Smart Dashboards** or **Legacy Dashboards**. Select **Copy Link** in your browser context popup, and use the copied URL as the **Custom URL** setting.
