

Purpose

The purpose of this documentation is to provide a guide for installing Nagios XI in an offline environment. RPMs and offline RPM tarballs will always follow the actual source releases by possibly several weeks. Not every release of Nagios XI will be released as an offline RPM.

Target Audience

This guide is directed towards Nagios XI administrators interested in installing Nagios XI onto systems potentially isolated from the internet or with other internal access only restrictions. This procedure is NOT intended to upgrade a system that was originally installed online or started as a pre-created VM and then moved offline.

Prerequisites

Nagios Enterprises highly recommends and can only support installing Nagios XI on a newly installed, clean system (a bare minimal install with nothing else installed or configured).

Your server must have access to base repositories for both RedHat or CentOS either via a local repository, or mounted DVD's. Additionally, on RHEL systems you will need the following packages from the **Optional Channel** installed on the server:

RHEL 6 Optional Channel Packages

```
graphviz-gd.x86_64  
perl-IO-stringy.noarch  
perl-Parse-RecDescent.noarch  
perl-XML-Simple.noarch  
php-mbstring.x86_64  
php-snmp.x86_64  
rrdtool-perl.x86_64  
rrdtool-python.x86_64
```

RHEL 7 Optional Channel Packages

```
dejavu-lgc-sans-fonts.noarch  
dejavu-lgc-sans-mono-fonts.noarch  
graphviz-gd.x86_64  
perl-Crypt-DES.x86_64  
perl-Parse-RecDescent.noarch  
php-mbstring.x86_64  
php-snmp.x86_64
```

Downloading And Installing Nagios XI Offline

Begin by visiting <https://repo.nagios.com/?repo=offline> and download the **Nagios XI Offline RPM Tarball** for your distribution and architecture.

Transfer the downloaded tarball to the server you will be installing Nagios XI on, place the tarball in `/tmp/rpms/`.

Execute the following commands to install Nagios XI. You will need to replace the tarball filename bellow with the file you downloaded in the previous step (*this documentation example won't be referencing the most recent tarball available, it is simply here as an example*):

```
cd /tmp/rpms
tar xzf nagiosxi-5-4.7.el7.x86_64.tar.gz
cd nagiosxi
./fullinstall
```

Once the installation completes, you should be able to navigate to your server via a browser to complete the installation.

```
http://<YOUR_SERVER>/nagiosxi/
```

Due to the nature of RPM based installs, there will be a simple message that states the installation is complete (*unlike a standard Nagios XI install which provides a summary and URL link*).

Upgrading Nagios XI Offline

The procedure for upgrading an offline installation of Nagios XI is almost exactly the same as the installation procedure. Begin by visiting <https://repo.nagios.com/> and download the **Nagios XI Offline RPM Tarball** for your distribution and architecture.

Transfer the downloaded tarball to the server you will be performing an upgrade of Nagios XI on, place the tarball in `/tmp/rpms/`.

Execute the following commands to upgrade Nagios XI. You will need to replace the tarball filename bellow with the file you downloaded in the previous step (*this documentation example won't be referencing the most recent tarball available, it is simply here as an example*):

```
cd /tmp/rpms
tar xzf nagiosxi-5-4.7.el7.x86_64.tar.gz
cd nagiosxi
./upgrade
```

Once the upgrade completes, navigate to your server via a browser:

```
http://<YOUR_SERVER>/nagiosxi/
```

Due to the nature of RPM based installs, there will be a simple message that states the upgrade is complete (*unlike a standard Nagios XI install which provides a summary and URL link*).

Migrate Standard XI Installation To Offline Install

It is not possible to convert an existing Nagios XI installation to an offline install.

You can however use our Backup and Restore procedure to migrate an existing Nagios XI installation to an offline installation. Please refer to the Backup and Restore procedure for detailed steps on how to perform the migration:

<https://assets.nagios.com/downloads/nagiosxi/docs/Backing-Up-And-Restoring-Nagios-XI.pdf>

Finishing Up

This completes the documentation on how to install Nagios XI in an offline environment.
