Purpose
This document describes how to install the Linux NRPE monitoring agent on target RHEL, CentOS, Fedora, Oracle Linux, CloudLinux, SLES, OpenSUSE, Ubuntu, and Debian Linux servers. Other Linux distributions may be added in the future.

Target Audience
This document is intended for use by Nagios Administrators who wish to monitor Linux servers using NRPE with Nagios XI.

Supported Distributions
The Linux agent installation is currently supported on RHEL/CentOS/Oracle Linux/CloudLinux 5+, Fedora 14+, SLES 11+, OpenSUSE 11+, Ubuntu 12+, and Debian 6+.

Installing The Agent
Download the Linux NRPE agent to the /tmp directory on the Linux server you wish to monitor.

```
cd /tmp
```

Unpack the installation archive you just downloaded:

```
tar xzf linux-nrpe-agent.tar.gz
```

Enter the newly created agent subdirectory:

```
cd linux-nrpe-agent
```
Run the wrapper script as root (if using Ubuntu you’ll need to either run sudo -i to run as root or run the command with sudo in front):

```
./fullinstall
```

This will automatically take care of a number of things for you, including:

- Modifying the distro's package manager repositories
- Installing prerequisite packages
- Creating required users and groups
- Defining services for xinetd
- Compiling and installing the agent and plugins
- Configuring the firewall
- Configuring the agent

The script will stop to prompt you for the IP address(es) for your monitoring server(s). You will need to type in either a) a single address, b) a list of addresses separated only by spaces, c) a subnet using CIDR notation like 10.25.0.0/16. That will configure the xinetd daemon to allow connections from those locations to the agent process.

**Finishing Up**

This completes the documentation on how to install the Linux NRPE Agent. If you have additional questions or other support related questions, please visit us at our Nagios Support Forums:
