

# Integrating MNTOS With Nagios

## Purpose

This document describes how to install Multi-Nagios Tactical Overview System (MNTOS).

MNTOS is a monitoring aggregation tool that can be used with Nagios XI or Nagios Core. This document is also intended for use by any Nagios administrator who wishes to deploy MNTOS for viewing a summary of multiple Nagios instances in one place. The installation script only works for RHEL and CentOS.

## Automated Installation

To install MNTOS, begin by establishing a terminal session to your server as the **root** user. Execute the following commands to download the automated installation script to the root home directory:

```
cd ~  
wget https://assets.nagios.com/downloads/nagiosxi/scripts/NagiosXI-MNTOS-install.sh
```

Make the script executable and then run it:

```
chmod +x NagiosXI-MNTOS-install.sh  
./NagiosXI-MNTOS-install.sh
```

The installation script will perform the following steps for you:

- Install prerequisite packages
- Download and untar MNTOS
- Install the MNTOS software and related system hooks
- Walk you through configuring your contacts and networks

The script is also documented internally if you would like to see its operation in more detail.

# Integrating MNTOS With Nagios

## Accessing MNTOS

To access your new MNTOS installation, open the following URL in your web browser (replacing <yourserver> with your Nagios or Nagios XI server's address):

`http://<yourserver>/mntos`

You should see a MNTOS dashboard with whatever information you gave for configuring contacts and networks:

**MNTOS** Multi Nagios Tactical Overview System  
Last check: Thu, 09 Feb 2017 15:15:02 -0500

MAIN OFFICE - ST. PAUL						CONTACTS FOR ST. PAUL
