Using the LDAP Server Wizard

To begin, start off by locating the LDAP Server Wizard. Navigate to **Configure > Configuration Wizards**. Search for 'LDAP' and click the **LDAP Server Wizard**.

How to Use the LDAP Server Wizard in Nagios XI

1. In **Step 1** of the wizard, enter the address of the LDAP Server. Click **Next**.

The screenshot shows the 'LDAP Server Configuration Wizard' interface. At the top, it says 'LDAP Server Configuration Wizard' with a 'Step 1' indicator and a settings icon. Below this, the 'LDAP Server' section is visible. There is an 'Address' label with a red asterisk and an information icon. The text input field contains '192.168.0.140', which is highlighted with a red box. Below the input field is a blue button labeled 'Next >'.

2. In **Step 2**, you will be prompted to put in various information regarding to your LDAP Server and how to connect:
 - **Address**(auto-filled) – The IP address of the LDAP server Nagios XI will connect to
 - **Host Name** – A descriptive name for the LDAP server to identify it within Nagios XI.
 - **LDAP Base** – The starting point in the LDAP directory tree for searches, usually in the format `dc=com`.
 - **Bind DN** – The distinguished name of the LDAP user that Nagios XI will use to authenticate and check the LDAP directory.
 - **Password** – The password associated with the Bind DN account.
 - **Version** – Specifies which version of the LDAP protocol to use (2 or 3).
 - **Security** – Determines the encryption method for LDAP connections:
 - **SSL** – Secure connection over TLS/SSL.
 - **STARTTLS** – Upgrades an unencrypted connection to TLS.
 - **Port Override** – The Port number that LDAP runs on. Defaults to 389 (unencrypted), or 636 (SSL).
