

Monitoring Oracle Tablespace in Nagios XI 2024

Purpose

This article will explain how to monitor Oracle Tables using the Oracle Tablespace monitoring wizard.

Target Audience

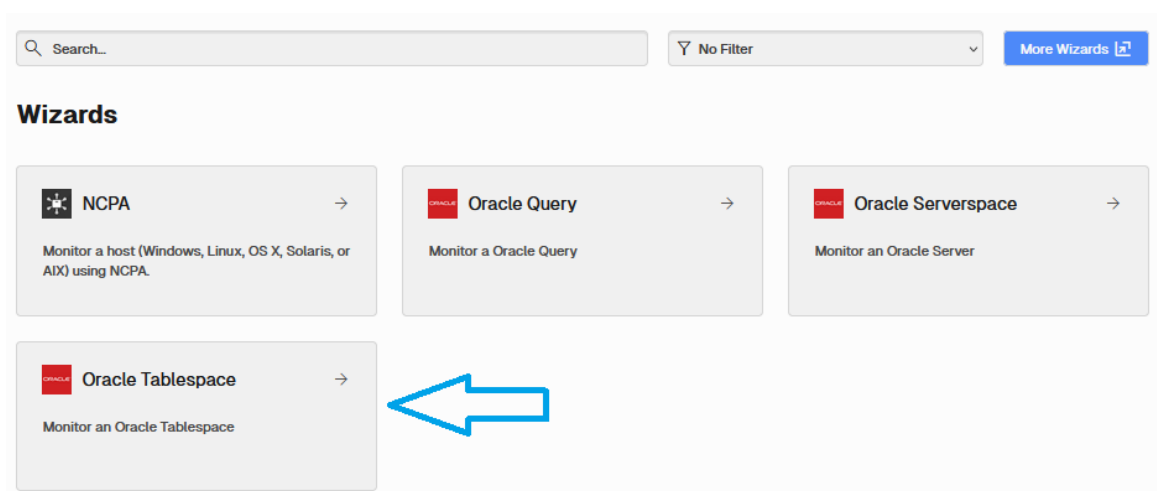

This document is intended for Nagios XI Administrators who wish to monitor Oracle Tables to ensure that key Tablespace metrics are performing as required.

Important Prerequisite

It is important to note that before proceeding you must first [install the Oracle plugins](#) on your Nagios XI server.

Using the Oracle Tablespace Wizard

To begin using the Oracle Tablespace wizard navigate via the lefthand menu bar to **Configure > Configuration Wizards** and select the **Oracle Tablespace** wizard:

Monitoring Oracle Tablespace in Nagios XI 2024

Next, enter the necessary details in Step 1 of the wizard:

- Type the fully qualified domain name or IP Address of the Oracle Server that you want to monitor.
- Enter a Port number (default is 1521).
- Enter the SID of your server.
- Type the username and password of the Oracle Server.
- In the Database field, enter the tablespace to connect to on the Oracle Server
- Click **Next**.

Configuration Wizard: Oracle Tablespace - Step 1

Oracle Tablespace

Specify the details for connecting to the Oracle tablespace you want to monitor.

Address:

The IP address or FQDNS name of the Oracle server.

Port:

The port to use to connect to the Oracle server.

SID:

The SID to use to connect to the Oracle server.

Username:

The username used to connect to the Oracle server.

Password:

The password used to connect to the Oracle server.

Database:

The tablespace to connect to on the Oracle server.

In Step 2 of the wizard, we configure all the options for monitoring. In the screenshot you can see some of the options available.

- Enter a valid **Host Name**.
- Enter in the metrics you would like to monitor on the remote Oracle server. You can also specify your warning and critical thresholds.
- Click **Next** once you have selected all the required options.

ORACLE Configuration Wizard: Oracle Tablespace - Step 2

Oracle Server

Address: adb.us-chicago-1.oracleclou

Host Name: adb.us-chicago-1.oracleclou
The name you'd like to have associated with this Oracle Tablespace.

Port: 1521

SID:

Username: ADMIN

Password:

Tablespace: SYSTEM

Oracle Tablespace Metrics

Specify the metrics you'd like to monitor on the Oracle Tablespace.

Tablespace Usage
Monitor amount of space used on the tablespace.
Warning: 90 Critical: 98

Tablespace Free Space
Monitor amount of space free on the tablespace.
Warning: 5 Critical: 2

Monitoring Oracle Tablespace in Nagios XI 2024

Complete the wizard by choosing the required options in wizard Steps 3-5.

To finish up, click on **Finish** in the final step of the wizard. This will create the new host and services and begin monitoring.

Once the wizard applies the configuration, you'll be able to view status details for your new Oracle Tablespace host and see the new services that were created.

Finishing Up
