

How To Use The TCP/UDP Configuration Wizard In Nagios XI 2024 And 2026

Purpose

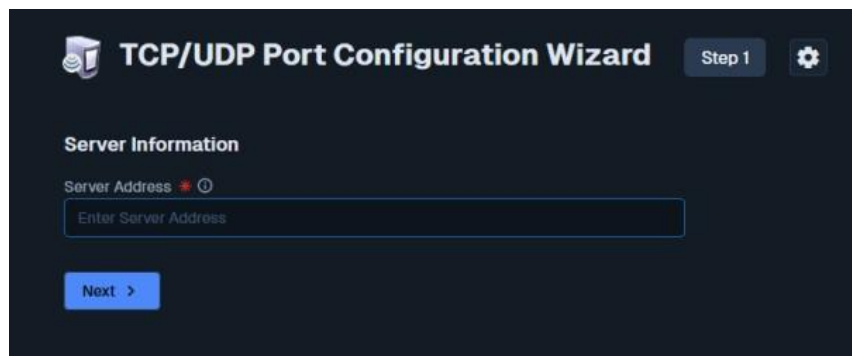

This document provides guidance on using the TCP/UDP Config Wizard in Nagios XI to effectively monitor network services that communicate over TCP and UDP protocols. The purpose of the wizard is to simplify the configuration process for administrators, allowing them to quickly set up monitoring for specific ports and services on remote hosts. By leveraging this tool, users can proactively detect outages, performance issues, or unexpected behavior in their network infrastructure, helping to ensure system reliability and uptime.

Using the TCP/UDP Wizard

1. Go to **Configure (gear icon) > Configuration Wizards**. Find and select the **TCP/UDP Configuration Wizard**, or use the search bar to find it and select it.

2. In **Step 1** of the wizard, you will need to enter the address of the server whose ports you want to monitor. After configuring the server address, click **Next**.

How To Use The TCP/UDP Configuration Wizard In Nagios XI 2024 And 2026

3. In **Step 2** of the wizard, you will need to:

- Configure the **Host Name** to your liking, this is what the host will be named within Nagios XI
- Select the **Common Server Port(s)** you would like to monitor
- If the server port(s) you want to monitor aren't listed, you can manually specify them

TCP/UDP Port Configuration Wizard Step 2

Server Details

Server Address
www.nagios.com

Host Name
www.nagios.com

Common Server Ports

Specify which ports you would like to monitor on the server or device

☐ FTP
☐ HTTP
☐ IMAP
☐ POP
☐ SMTP
☐ SSH

Custom Server Ports

Specify any custom TCP/UDP ports you would like to monitor on the server or device

Port #	Port Type	Port/Application Name	Send String	Expect String
	TCP			
	TCP			
	TCP			
	TCP			

Add Row | Delete Row

< Back Next >

- The port number is the port you want to monitor
- Choose the port type of the port you want to monitor
- Choose a port/application name to your liking, it is the name that will appear in Nagios XI for that particular port/application
- Specify a send string to send to the port, or leave it blank, this is the string that Nagios XI will send to the port when monitoring it
- Specify an expected string response from the port, or leave it blank, this is the string you expect to receive from the port when monitoring it

- After configuring these settings to your liking, click **Next**.

4. Complete the wizard by choosing the required options in **Step 3 – Step 5**.

To finish up, click on **Finish** in the final step of the wizard. This will create the new host and services and begin monitoring.

Once the wizard applies the configuration, click the **View status details** for link to see the new service that was created.
