

How To Manually Configure Nagios XI 5

Purpose

This document describes how to manually configure Nagios XI 5.

If you are manually configuring Nagios XI 2024, see [Managing Config Files Manually In Nagios XI 2024](#)

Directory Location

All manual object configuration files should be stored in the following directory:

```
/usr/local/nagios/etc/static
```

Configuration files in this directory are processed by the monitoring engine (Nagios Core), but are not imported into the Nagios XI web configuration GUI.

Verifying Your Configuration

Use the following command to verify your manually maintained Nagios Core configuration files:

```
/usr/local/nagios/bin/nagios -v /usr/local/nagios/etc/nagios.cfg
```

Check the command output for any error messages.

Resolving Configuration Errors

To resolve errors with manually maintained configuration files, make sure to read and follow directions for maintaining object configuration definitions in the Nagios Core manual. You can view the latest version of the [Nagios Core manual](#).

Finishing Up

This completes the documentation on how to manually configure Nagios XI. If you have additional questions or other support-related questions, please visit us at our Nagios Support Forum, Nagios Knowledge Base, or Nagios Library:
